India has voted in favour of L.14 regarding No First Placement of Weapons in Outer Space.

As a major space faring nation, India has vital developmental and security interests in space. The resolution states that the legal regime applicable to outer space needs to be consolidated and reinforced. India supports this objective and the strengthening of the international legal regime to protect and preserve access to space for all and to prevent without exceptions, the weaponization of outer space. We support the substantive consideration of PAROS in the CD, along with other proposals that have been tabled. While not a substitute for legally binding instruments, TCBMs can play a useful and complementary role. Discussions on a draft International Code of Conduct for Outer Space Activities should be inclusive, both in process and substance, to ensure a product of universal acceptance. We see the No First Placement of weapons in outer space as only an interim step and not a substitute for concluding substantive legal measures to ensure the prevention of an arms race in outer space, which should continue to be a priority for the international community.
